

ABSTRACT OF THE DISCLOSURE

1
2 A method for manufacturing a three-dimensional molded blade
3 includes a press molding process, a bonding process, and a cutting process.
4 The three-dimensional molded blade comprises a three-dimensional molded
5 layer, and a substrate mounted on a bottom of the molded layer. Thus, the
6 molded layer forms an arch-shaped structure on the surface of the substrate, so
7 that the molded blade has a greater structural support strength with a light
8 weight, thereby decreasing consumption of rotational energy of the ceiling fan.
